

Side Tray for the E2

For all E2 table frames

For your computer, the stack of files or blueprints that have to wait their turn: The Side Tray can be attached without screws and easily holds 25 kilos.

Simply hang it on the top or bottom of one of your E2's side pieces. If you choose top, height adjusters are a must. The tray then rests securely on the crossbar.

With a width of 600, 700 or 780 mm, the Side Tray matches the frame depth of your E2. It is 315 mm deep and made of high-quality steel.

To complement your E2, we coat it colorless or colored. Unfortunately, chrome is the only option we don't have. The noble chrome plating is just too sensitive for the corners and edges of folders, boxes, and Co.
